

We are transitioning from our old Magento webshop and are in the process of setting up a WooCommerce webshop. We have chosen your B2B King Pro plugin.

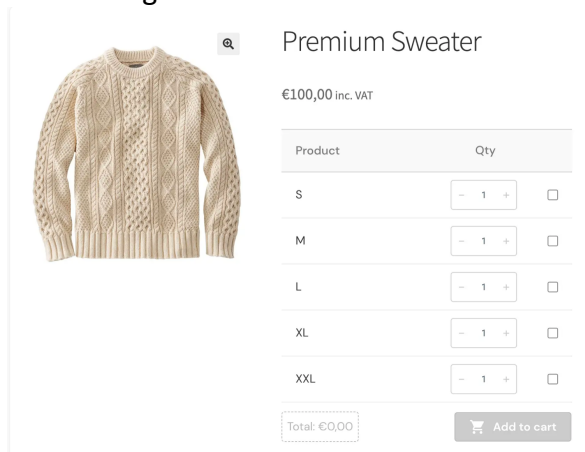

It all looks very nice, it has some great features for our business, but we appear to be a special type of seller that keeps running into limitations with the plugins for our core business products.

We are a supplier of industrial cleaning products and related items. The related items are not the problem. However, our cleaning products are sold in various packaging options and are offered with a price per liter. In other words, the customer first selects the desired packaging for a product and then the quantity.

What we need is:

- Parent/child products (Grouped product), optionally variable product, but grouped is our preference (due to separate article numbers that correspond to our SAP system and the next 2 points:)
- Tier pricing for child products (you have % discounts that are great btw!)
- Step functionality for the quantity of each child product (+ min/max would be good)

This looks great:

But we need:

Thumbnail Picture	package	Quantity in steps of:	Tierprice per liter	Item nr.	Select (on/off)
1l.jpg	1L bottle	1,2,3,4,.....etc	14,51	93016-001	
10.jpg	10L can	10,20,30.....etc	14,51	93016-010	
25l.jpg	25L can	25,50,75.....etc	14,09	93016-025	
60l.jpg	60L can	60,120,180,....etc	12,69	93016-060	
200l.jpg	200L drum	200,400,600,800,...etc	11,50	63016-200	

This would be ideal, but thumbnail and Item nr. are of course window dressing.

I really hope you can help us realize this within your plugin. I saw that the bulk variations is in beta. I would be happy to be a testcase for new development in this specific area.
